

Dock Sides Product Overview

The Dock Sides product line consists of a receiver component which is mounted permanently to the dock or deck and a series of mounting attachments which can be quickly attached to and removed from the receiver. The mounting attachments will provide easy mounting for a growing number of dock and deck accessories.

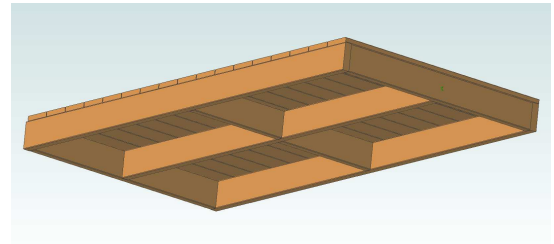

The Dock Sides receiver component mounts to the underside of the dock or deck and is completely out of the way and nearly invisible when Dock Sides attachments are not in use. Since the Dock Sides system mounts under the dock or deck, and the attachments are mounted off the side of the dock, no valuable dock or deck space needs to be taken up by the accessories. The Dock Sides system eliminates on dock clutter which enhances dock safety. Since the Dock Sides system mounts under and flush with the side of the dock, there are no sharp brackets protruding to get in the way of boat docking, swimming, or other activities when Dock Sides attachments are not in use.

There are a number of different dock and deck styles and the Receiver comes in three variations to accommodate mounting to your particular dock or deck style:

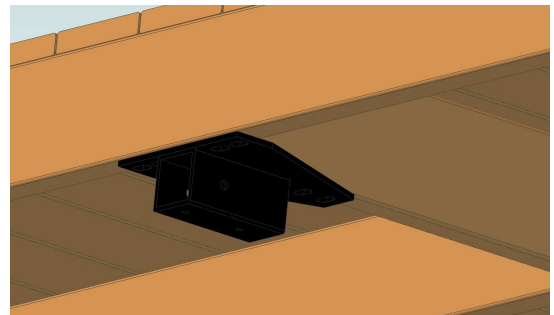

- Clamp with cross beam mounting bracket – for mounting to a truss style side rail aluminum or steel dock
- Slotted with cross beam mounting bracket – for mounting to a solid side rail aluminum or steel dock
- Slotted – for mounting to a wooden or metal frame dock with structural cross members

Adding a Dock Sides Accessory to your dock or deck:

Starting on the underside of your dock or deck ...

The Dock Sides Receiver is permanently mounted underneath and out of the way.

Any Dock Sides Accessory is then easily mounted without the need for tools.
